types of aircraft are considered. The types of aircraft include: (1) fixed wing aircraft, (2) V-STOL aircraft, (3) rotating wing aircraft, and (4) air cushion vehicles in addition, various measures for conservation and protection of hearing are proposed. D.L.G.

N74-22668* National Aeronautics and Space Administration. Langley Research Center, Langley Station, Va. CURRENT STRUCTURAL VIERATION PROBLEMS ASSOCI-ATED WITH NOISE

John S. Mixson In AGARD Noise Mech. Mar 1974 16 p refs (For availability see N74-22640 14-02)

As the performance of serospace vehicles has increased, the noise generated by the propulsion system and by the passage of the vehicle through the sir has also increased. Further increases in performance are now underway for space vehicles such as the space shuttle vehicle and for short distance takeoff and landing (STOL) sircusts, and are being planned for supersonic aircraft. The flight profiles and design features of these high-performance vehicles are reviewed and an estimate made of selected noise-induced structural vibration problems. Considerations for the prevention of acoustic fatigue, noise transmission, and electronic instrument malfunction are discussed. Author

RESOLUTION OF TURBULENT JET PRESSURE INTO
AZIMUTHAL COMPONENTS

H. V. Fuchs /n AGARD Noise Mech. Mar. 1974 10 p refs (For availability see N74-22540 14-02)

The results are presented of experiments conducted to analyze the turbulent pressure field with respect to the jet noise problem. The experiments deal apecifically with the turbulent pressure field in a fixed plane normal to the jet exis. The findings indicate that at low Mach numbers, considerable turbulent energy is stored in lower order azimuthal components and, in particular, in the

SOME EXPERIMENTAL RESULTS ON EXCESS NOISE

large scale coherent axisymmetric type of fluctuation.

A. D. Young In AGARD Noise Mech. Mar. 1874 5 p refs (For availability see N74-22640 14-02)

Compressed air was duoted from a 12 in. diameter pipe into a plenum shamber 24 in. diameter and 4 ft long. This was followed by a contraction leading to a nozale from which the air emerged into the atmosphere in an anechoic chamber as a jet. The plenum chamber contained a honeycomb and gauze to help reduce the flow turbulence. The resulting jets were very steady and with low turbulence levels. Noise measurements were made at a distance of 6 feet from the nozale exit. In addition to the measurements on the basic jets, various modifications were introduced upstream of the nozale exit to produce various intensities and scales of turbulence, and the consequent effect on the noise characteristics were measured. The results are given and their significance is discussed.

Includes light phenomena

N75-10776# Advisory Group for Aerospace Research and Development, Paris (France). OPTO-ELECTRONICS

Sep. 1974 143 p refs in ENGLISH and FRENCH

(AGARD LS-71) Avail NTIS HC \$5.75

A study was conducted of the state-of-the-art of electrooptic developments applied to the avionics field of research and development. A review of optics including fiber optical techniques and their exploitation in the aylonics field for transmission of information is presented. The capabilities of aircraft using television, low light television, infrared, lasers, and optical methods to sense and display information are analyzed. System designs and problems encountered in applying the sensors are discussed. For individual titles, see N76-10775 through N75-10784.

INFRARED AND VISIBLE RADIATION DETECTORS FOR IMAGING AND NON-IMAGING APPLICATIONS B. R. Holeman In AGARD Opto-Electronics Sep. 1974 16 p.

refs (For availability see N75-10774 01-74)

A general description of a photodetector is presented and, after defining the relevant parameters to describe its operation, the limits set by the quantum nature of the radiation input are outlined. Bolometric detectors are reviewed with particular reference to triglycine suiphate. Photoconductive, photovoltaic and photoemissive detection processes are compared before describing the wide range of single element detectors utilising these effects. The multiplement technique, as shown in thermal infrared detectors such as cadmium-mercury telluride and lead-tin telluride, and in visible and near infrared detectors using silicon photosensitive integrated circuits, is described. The principles of electron beam readout are outlined and devices using this technique, such as vidicons, orthicons and isocons are reviewed. Finally, the state of the art in an alternative solid state approach, charge coupled tiensfer, is discussed. Author

HEAD-UP DISPLAY OFFICE

R. A. Chorley In AGARD Opto-Electronics Sep. 1974 18 p (For availability see N75-10774 01-74)

The factors which influence the definition of the optical system for a Head-Up Display are defined. The conflicting requirements for wide fields of view and compact, easily installed hardware are discussed (with relation to both refractive and reflective optical systems) together with various espects of optical performance which influence the overall display system performance. The primary reason for installing a HUD system in a military aircraft is the improved weapon-aiming capability it can provide. From this point of view the HUD can be looked upon as a sophisticated descendant of the various forms of optical gunsight which have been in service for a quarter of a century or more. Thus the most basic requirement for a military HUD system is that it should provide the information needed for weapon aiming, and this means that it must provide an aiming symbology display, focussed nominally at infinity, so that the pilot can correlate and utilize the display and the outside world information simultaneously. MEDICAL OFFICER CAREER MANAGEMENT AND RETENTION IN NATO ARMED FORCES: A WORKING GROUP REPORT

G. Zinnemann, ed. Dep. 1975 107 p refs (AGARD-R-635) Avail: NTIS HC \$5.50

The armed forces of most NATO nations experience great difficulty in attracting and retaining young medical officers unless a doctor draft, national service, or pay-back for their medical education makes a period of active military duty a legal requirement. Some of the disadvantages inherent in a military medical career vie-a-via a civilian practice deter the average young doctor from choosing a career in military medicins voluntarily. Since the ever-present throat of a doctor shortage constitutes a problem of operational significance, the Working Group sought to: (1) define the factors of career motivation, (2) compare approaches, methods, and attempted solutions to the problem in participating countries, and (3) offer a set of recommendations designed to alleviate the situation.

GENERATION, USE, AND TRANSFER OF INFORMATION
Allen Kent /n AGARD How to Obtain Inform. in Different
Fields of Sci. and Technol. May 1974 7 p. refs (For availability see N74-27457 18-34)

The information explosion has produced an effect that has not been widely recognized. The inability of individuals to read all potentially relevant material has changed the nature of questions asked. Now, questions are asked more frequently that relate to a problem, with the aspects of the question derived from the problem at hand rather than recalled from previous contact with specific items of the literature. Information systems have attempted to respond to this change through deeper analysis of materials, and coordination of desired aspects of subject matter using computers. The need for connection between the terminology of questions posed and the available analytics has become more critical. More precise control of vocabulary is needed, leading to the construction of mechanisms such as theseuri.

INTERNATIONAL MEDICAL INFORMATION EYSTEMS
(Bodg E, Unger In AGARD How to Obtain Inform in Different Fields of Sci. and Technol. May 1974 7 p (For availability see N74-27457 16-34) N74-27460 Furbwerke Hoechst A.G., Frankfurt (West Germany).

The flood of information especially in medical sciences can with no means, and especially not with the well known conventional means, be accomplished today. Even the creation of localized medical information systems can not cover the demands the medical profession is bringing forward. With the use of computers new ways are opened. Various methods have been developed in order to analyze, organize and evaluate the present voluminous flood of information. Communication between existing printed information and the medical profession in all

fields of this science is considered. A new automated on-line terminal oriented storage and information retrieval system is discussed on a worldwide international basis.

PROBLEMS OF A BIBLIOGRAPHIC NETWORK AND DOCUMENTATION CENTER IN BELGIUM (LES PROBLEMES DE RESEAUX POUR BIBLIOTHEQUES ET CENTRES DE DOCUMENTATION EN BELGIQUE)

Pletre-endre Piron In AGARD Nati. and Intern. Networks of

Libraries, Doc and Inform. Centres Mar. 1975 6 p refs In FRENCH; ENGLISH summary (For availability see N75-23372 14-82)

A Governmental committee on scientific policy has undertaken to promote the optimization of some library and documentation activities by networking. Three projects were outlined. Share cataloguing between scientific libraries (such as the Royal Library and Universities), union catalog of the same institutions. Information retrieval from bibliographic data bases of international interest. Proposals were made for building up a wide network linking documentation centers throughout the country.

N75-23374 Statekontorer, Stockholm (Sweden) A DATA NETWORK IN THE DOCUMENTATION AND LIBRARY AREA

Rolf Andren /r. AGARD Nati. and Intern. Networks of Libraries, Doc. and Inform. Centres Mar. 1975 5 p (For availability see N75-23372 14-82)

The Swedish Agency for Administrative Development, SAFAD, is developing an experimental network to be used by different education and research institutes to access information retrieval and library systems located at different places. The basic principle is that it shall be possible to communicate with several date bases through one network from one terminal. The network contains functions that make it possible to connect different kinds of terminals, e. g. teletype and various CRT terminals. The users are primarily the Bwedish university libraries and the first data bases to be connected are the LIBRIS, the MEDLINE and the ESRO SDS data banks. Operation was started in spring 1974 but before a decision to build out the network is taken, an evaluation will be made of system performance before May Author

DATA BANKS AND NETWORKS FOR ENGINEERING DESIGN PURPOSES

G. C. Freeman In AGARD Nati. and Intern. Networks of Libraries, Doc. and inform. Centres Mar. 1975 6 p refs (For availability see N76-23372 14-82)

Special problems of CAD are discussed and data iridicate that because of the hierarchical nature of integrated design systems the local data base will also be hierarchical in structure. Communications with other systems via a computer network make it desirable that application programs and data bases should not be inextricably linked. Such a policy would ensure maximum flexibility, making possible economies of scale through the sharing of expertise and software that could then take place.

N75-23377 British Library, London (England). Research and Development Dept.

AN APPROACH TO THE DEVELOPMENT OF LIBRARY AND INFORMATION NETWORKS WITH SPECIAL REFERENCE

P. L. Holmes In AGARD Natl. and Intern. Network of Libraries, Doc. and Inform. Centres. Mar. 1975. 7 p. refs (For availability see N75-23372 14-82)

The need for careful preparation and planning of library and Information networks is discussed, and the British Library research program explained. Three parallel phases, concerned with assessment of existing on-line bibliographic information services, provision of data for planning of a library and information network in the UK, and examination of computing, telecommunication, and reprographic techniques for their applications to informationhandling, are covered.

N75-23378 European Space Research Organization, Francati Space Documentation Service. ON-LINE NETWORKING BETWEEN INFORMATION CEN-TRES IN EUROPE

D. M. Audsley In AGARD Neti. and Intern. Networks of Libraries, Doc. and Inform. Centres. Mar. 1975, 12 p. refs (For availability see N75-23372 14-82)

Future trends in on-line networking for information retrieval purposes and the possibilities of collaboration between networks in Europe are examined. The technical aspects of major on-line networks are mentioned. The development of a special purpose distributed European-wide information network is postulated. The need for extremely close and detailed levels of Euromean coordination during the development and implementation of such a network is anticipated. The possible uses of communications satellites, in particular ESRO projects, are mentioned.

M75.23376 Commission of the European Communities. INTERNATIONAL NETWORKING: INFORMATION RE-TRIEVAL REQUIREMENTS

P. L. VanVelze and G. W. P. Davies In AGARD Natl. and Intern. Networks of Libraries, Doc, and Inform. Centres 1978 7 p (For availability see N78-23372 14-82)

A network for scientific and technical information is being developed for the European Community. The authors represent the Commission of the European Communities, which was charged with the task of coordinating the activities of Member Countries to work towards this common network. The main topics discussed are: the goals of the planned network, the project organization. the role of the telecommunications facilities and the factors which ere influencing the design of the network.

N75-23380 Cegos-Tymshare, Saint Cloud (France) THE TYMNET NETWORK DE RESEAU TYMNET! Michel Raclet In AGARD Nati. and intern. Networks of Libraries, Doc. and Inform. Centres Mar. 1978 4 p refs in FRENCH (For availability see N75-23372 14-82)

A description is given of TYMNET, a time sharing telecommunication networ: utilized by small data processing centers. Data cover transmis: un, connection, and surveillance procedures. Network hardware and software are discussed along with advantages to small processing centers using the system.

An up-to-date review is given of micrographic technology, computer input microfilm (CIM) and computer output microfilm (COM), as well as an indication of the market size and growth rate. After an account of the fundamentals of micrographics. COM recording techniques and recorders are described and CIM techniques reviewed. Other topics cover indexing and retrieval techniques, systems design, alphanumeric and graphic applications. Future trends in micrographic technology are indicated. For individual titles, see N77-10946 through N77-10953.

A review of the state-of-the-art in available storage and retrieval methods and techniques used with inicrographic systems is given. Roll film, flohe and apenture card systems with their manual, semi-automatic and fully automatic retrieval equipment are evaluated, analyzed and compared. The relationship of updatable microfilm to storage and retrieval systems are explained

N77-10980# Central Computer Agency, London (England) THE SYSTEMS APPROACH TO COMPUTER OUTPUT MICROFILM

Bernard Terry In AGARD, Rev. or Develop, in Computer Cutput Microfilm (COM) and Micrographic Technol., Present and Future Sep. 1976 5 p (For primary document see N77-10945 01-82) Aveil: NTIS HC A04/MF A01

The use of COM was primarily based on the need to escape from the avalanche of paper emanating from computer systems and to minimize the escalating costs of printing, duplication and distribution. The scope for the systems analyst to apply his experience to the tasks to be 'dumped' to microform was inhibited by the need to accept existing page layouts in order to effect the transfer from paper with the minimum of time and effort to maximize savings. However even within these limitations there are design options open to the analyst, and these are identified and explored with a view to optimizing benefits and cost savings. The range of COM techniques and hardware features, together with the systems implications, are described. The potential for developing novel output systems utilizing the particular advantages of COM is discussed.

MAXIMISING THE USE OF AN INFORMATION SERVICE IN AN INTERNATIONAL ENVIRONMENT

W. A. Martin In AGARD Advan. in Retrieval Technol. as Related to Inform, Systems Dec. 1976 18 p refs (For primary document see N77-18930 07-82)

Avail: NTIS HC AOB/MF A01

The development of the European Space Agency Space Documentation Service (SDS) from 1964 to date is briefly reviewed. SDS database policy, which must satisfy the needs of both the agency and its member countries, is explained and utilization trends for all major databases examined. Based on a target of self-support since 1971, the evolution of SDS charging policy and the integration of the recently introduced RTC (remote terminal concentrator) are described. The derivation of database related costs, their potential for reduction, and the useful price reductions which would result from a significant increase in overall system load factor are outlined. The consequences and implications of working in an international environment are reviewed, and the particular problems of data communications in Europe are emphasized. The exponential growth in demand for information services as indicated by recent projections is noted, highlighting the need to Improve and simplify current types of service; ongoing experimental work at SDS on an Integrated Information base is briefly mentioned including some thoughts on the multi-lingual

N77-16938# Massachusetts Inst. of Tech., Cambridge. THE VIRTUAL-SYSTEM CONCEPT OF NETWORKING BIBLIOGRAPHIC INFORMATION SYSTEMS

J. Francis Reintjes. In AGARD. Advan. in Retrieval Technol. as Related to Inform Systems Dec. 1978 7 p. ref (For primary document see N77-16930 07-82)

(Grants NSF SIS-74-18165; NSF SIS-75-22946) AVAIL NTIS HC AOB/MF AO1

From a retrieval effectiveness viewpoint, it is highly desirable to allow the seeker of information to engage the information system himself rather than to have him work through another person. Bacause of the histerogenalty that presently exists among data bases and systems that contain them; however, placing the sesker directly online is impractical. A system is described which conveys the impression of standardization to the information seeker through use of a computerized interface translator interposed between end users and the systems they wish to access. The interface thus creates a uniform virtual system, and it is this single, virtual system, that the user engages.

THE NATIONAL STANDARD REFERENCE DATA SYSTEM Stephen A. Rossmassler In AGARD Advan in Retrieval Technol as Related to Inform Systems Dec. 1976 4 p. refs (For primary document see N77-16930 07-82) AVAIL NTIS HC A08/MF A01

The National Standard Reference Data System is a coordinated, but decentralized effort to increase the reliability and availability of numerical data used in and produced by the physical sciences and engineering. Individual data projects on apacific technical subjects are established to extract, evaluate, and compile. in a systematic manner, all relevant data from the scientific journal and technical report literature. The evaluation process compresses the original data, and the systematic treatment aids the user in filling his data needs. Sophisticated data-handling capabilities including on-line information and data retrieval are developed in individual data centers and also in a central data systems design group.

DEVELOPMENT AND APPLICATIONS OF SPATIAL DATA RESOURCES IN ENERGY RELATED ASSESSMENT AND PLANNING

Richard J. Olson, F. Glenn Goff, and Jorry S. Olson In AGARD Advan, in Retrieval Technol, as Related to Inform, Systems Dec. 1976 7 p refs (For primary document see N77-16930 07-82) (Publ-901) Avail: NTIS HC A08/MF A01

A spatial database for the Eastern United States at the county-subcounty unit level of resolution is described. The database contains information on terrain, water resources, climate, land use, forest resources, agriculture, wildlife resources, critical natural areas, human population and energy uses. A spatial hierarchy of metric, geodetic and geopolitical scales is defined as a framework to organizing the data. Building blooks that can be assembled or aggregated to satisfy analysis needs allow accessing more detailed spatial data by using pointers to information not stored in the database. Uses of the database are related to the capability to cross-reference and integrate information in various subject sectors, utilizing spatial units and temporal periods commensurate with regional themes. An investigation of potential changes in vegetation patterns related to predicted temperature changes from increased atmospheric CO2 is presented to illustrate an ongoing application of data resources. Other themes include coal extraction, landscape patterns, habitat and population dynamics of selected biological species, and energy facility siting

IMPLICATIONS OF FUTURE DEVELOPMENTS IN COMPUT-ING TECHNOLOGY

Frank V. Wagner In AGARD Advan. in Retrieval Technol. as Related to Inform. Systems Dec. 1976 12 p refs (For primary document see N77-16930 07-82)

Avail: NTIS HC A08/MF A01

A review is made of cost/performance trends in computing technology, including hardware elements and software development. The resulting impact on computer systems architecture is briefly covered. Particular emphasis is placed on the trend toward decentralization. The development of distributed computing and the use of modern dedicated small computers is examined and analyzed. An explanation is given for Grosch's Law, which has described the relationship of computing power and computer price. Recent developments may invalidate the conclusion based on Grosch's Law that any enterprise should get its data processing done on the largest possible computer that the enterprise can afford to acquire, or to which it can afford to buy access. Conclusions are drawn that a radical revolution in the use of computers has begun, and that in the future, a new principle of decentralized computing may replace Grosch's Law.

AERONAUTICAL RESEARCH LABORATORIES, AUSTRALIA

Margaret O. Sheppard In AGARD The Probl. of Optimization of User Benefit in Sci. and Tochnol. Inform. Transfer Mar 1976 9 p. refs (For availability see N75-25098 15-85)

A computer-based SDI system developed at the Auronautical Research Laboratories, Australia, using an unsophistic ited search logic, has been operating and developing for nearly five years interrogating ADSATIS and U.S. NTIS GRA magnetic tapes for over 130 research oriented users. An analysis was made of use statistics. The response to a recent questionnaire concerning information gethering habits of ARL research staff and the role of ARL SDI service within the overall pattern of information seeking is discussed in some detail. As a result, it is considered that an ARL type SDI system can be recommended when the

system is designed to serve scientific research staff in what may be regarded as a fairly typical research establishment. Once in operation, an ARL type SDI system can be elaborated for those who require a more sophisticated service, but experience at ARL suggests that the needs of the majority will be met by the simpler SDI service.

LISTENING TO THE USER: A CASE STUDY

Harold E. Pryor In AGARD The Probl. of Optimization of User Benefit in Sci. and Technol. Inform. Transfer Mar. 1976 7 p (For availability see N76-25098 15-85)

The managers of the NASA Scientific and Technical Information System consistently maintain that whatever scientific and technical information services and products are provided must be geared primarily to user needs and not simply system compatibility and convenience. A system evaluation study begun in 1973 and continued to the present is described. The thrust of this on-going examination is to regularly evaluate the usefulness of the present information system to those it is intended to serve, engineers and scientists working in their professional roles, and to identify areas and ways in which the system can be made more responsive to user needs. Techniques used have covered the range from personal, in-depth interviews to widely distributed questionnaires. The findings have been positive. Many refinements made to on-going programs and projects and new endeavors begun in direct response to stated user needs are discussed. In the main these needs are not unreasonable and thus can be responded to with cost effective system modifications.

INFORMATION REQUIREMENTS OF ENGINEERING DESIGNERS

J. R. Sutton In AGARD The Probl. of Optimization of Usor Senefit in Sci. and Technol. Inform. Transfer Mar. 1976 8 p. refs (For availability see N78-25098 15-85)

The information requirements of engineering designers are examined in the light of several surveys. The information requirements of mechanical engineers differ from those of scientists and the information requirements of designers differ from those of other mechanical engineers. Some of the results of a survey of information requirements of engineering designers are reported. Designers prefer familier and convenient sources of information.

N76-25111 Brown, Boveri und Cie, A.G., Mannhelm (West Zentralstelle fuer Technische Dokumentation. INDUSTRY DOCUMENTATION: A NECESSARY EVIL Werner Diers In AGARD The Probl. of Optimization of User Benefit in Sol. and Technol. Inform. Transfer Mar. 1976 10 p refs (For availability see N76-25098 15-85)

Documentation of technical and scientific literature in industry in the Federal Republic of Germany is discussed in terms of user needs. The advantages of a centralized, computerized documentation center are reviewed.

N76-25112 Norwegian Center for Informatics, Oslo. THE VOICE OF THE USER: HIS INFORMATION NEEDS AND REQUIREMENTS (WHICH ARE NOT WHAT THE INFORMATION SPECIALISTS THINK THEY ARE)

A. Disch. In AGARD. The Probl. of Optimization of User Benefit in Sci. and Technol. Inform. Transfer Mar. 1976 8 p refs (For availability see N76-25098 15-85)

Two user studies were carried out in Norway. In the first one 1,400 engineers were asked to list those information sources that they had used lately and which had proved to be of practical value in their daily work. The follow-up study was a detailed study of the information gathering habits of a limited number of users. It was found in both studies that the traditional information channels were of little value to the practical user. Two attempts to remady these findings are described.

N76-25113 Georgetown Univ., Washington, D.C. THE GATEKEEPER HYPOTHESIS AND THE INTERNA-TIONAL TRANSFER OF SCIENTIFIC KNOWLEDGE Arnold J. Herzog In AGARD The Probl. of Optimization of User Benefit in Sci. and Technol. Inform. Transfer Mar. 1976 9 p. refs (For availability see N76 25098 15-85)

The transfer of information across international boundaries is discussed. Interpersonal contacts, both domestic and foreign are considered the means of diffusing information from the industrial community and the scientific community. Economic factors are included.

Summary of Panel Discussion

E. T. Sharp, ed. (Shape Technical Centre) In its The Probl. of Optimization of User Benefit in Sci. and Techol, Inform Transfer Mar. 1976 10 p (For availability see N76-25098 15-85)

A summary is provided of the highlights of the various papers presented. Topics covered include: the role of communication in technological innovation, the importance of direct communication, user requirements, and the market in which the information service should operate. A general discussion of issues is

99 GENERAL

N75-15595# Advisory Group for Aerospace Research and Development, Paris (France). DIRECTOR'S ANNUAL REPORT TO THE NORTH ATLANTIC MILITARY COMMITTEE 1973 83 p refs

Avail: NTIS HC \$4.75

The activities of AGARD are reviewed. The following panel programs are discussed: (1) serospace medicine: (2) avionics; (3) electromagnetic wave propagation: (4) flight mechanics; (5) fluid dynamics; (6) guidance and control; (7) propulsion and energetics; (6) structures and materials; and (9) technical information. The meetings held, the publication produced, and consultant services rendered are presented.

Jan. 1975 73 p

(AGAND-Bull-76-1) Avail: NTIS HC \$4.25

The Advisory Group for Aerospace Research and Development (AGARD) bulletin containing information on all planned 1975 meetings is presented. The information includes dates, locations, and descriptions of the themes. A list of all AGARD publications which were released in 1974 and abstracts of the reports is provided. The membership of the various AGARD conmittees is reported in a document which identified the name of each representative and the country represented.

N76-18037# Advisory Group for Aerospace Research and Development, Paris (France). AGARD BULLETIN: MEETINGS, PUBLICATIONS, AND MEMBERSHIP

Jan. 1976 73 p refs

(AGARD-Bull-76-1) Avail: NTIS HC \$4.50

Information on the following was presented: (1) all AGARD meetings planned for 1976, including dates, locations, and brief descriptions of their themes, (2) list of all AGARD publications released in 1975, together with their abstracts, (3) AGARD membership lists as of 1 January 1976.

N76-18038# Advisory Group for Aerospace Research and Development, Paris (France). AGARD BULLETIN. TECHNICAL PROGRAM 1976 Jun. 1975 36 p refs (AD-A010370; AGARD-Bull-75-2) Avail: NTIS HC 34.00 CSCL

05/2 A chronological listing of meetings scheduled for 1976 is presented. Detailed descriptions of AGARD programs and

publications are included; these include panels on serospace medicine, evionics, electromagnetic wave propagation, flight mechanics, fluid dynamics, guidance and control, propulsion and energetics, structures and materials, and technical information. MJ.S.

N76-19048# Advisory Group for Aurospace Research and Development, Peris (France). DIRECTOR'S ANNUAL REPORT TO THE NORTH ATLANTIC MILITARY COMMITTEE, 1974 Mar. 1978 80 p refs Avail: NTIS HC \$5.00

A summary of the scientific and technical achievements accomplished during 1974 by AGARD was presented. The following information was given: (1) meetings held. (2) publications produced and consultant services rendered. (3) detailed description of the various individual programs. (4) personnel listing, and (5) budget summary.

X75-70672 Advisory Group for Aeronautical Research and Development, Paris (France). DETECTION AND LOCATION OF SHELTERED AND DISPERSED AIRCRAFT, VOLUME 1: EXECUTIVE SUMMANY, VOLUME 2: APPENDIXES C. W. Cooper [Jul. 1973] 1 p (AGARD-AR-59) NATO-Classified report

NOTICE: Available to U.S. Government Agencies and Their

Contractors.

The nature of sheltered and dispersed aircraft and their environment is examined. Military requirements for reconnaissance, attack, and damage assessment are reviewed. The test provided a survey of information on a wide range of established and new sensing techniques. Technique capabilities were considered over a full range of lighting and weather conditions. Combination possibilities of sensors and information retrieval problems in real time were explored. Author

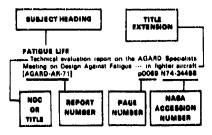

AGARD INDEX OF PUBLICATIONS (1974 - 1976)

TYPICAL SUBJECT INDEX LISTING

The subject heading is the key to the subject content of the document. A brief description of the document, e.g., title or title plus a title extension, is included for each subject entry to indicate the subject heading context; these descriptions are arranged under each subject heading in accession number order. The report number helps to indicate the type of document cited. The page number identifies the page in the abstract section (Part I) on which the citation appears. The NASA accession number denotes the number by which the citation is identified on that page
